The solution to a multiplication or division problem that has **same signs** will be positive.

The solution to a multiplication or division problem that has **different signs** will be negative.

List the order of operations.

P: parentheses

E: exponents

M: multiplication

D: division

A: addition

S: subtraction

When you add or subtract fractions without a calculator, you must have a common denominator.

Explain how to change a fraction to a decimal:

divide numerator and denominator

Explain how to change a decimal to a fraction.

look at the place value, put tenths over 10, hundredths over 100, etc. and simplify

When finding the distance between two numbers, the answer is always positive.

Draw this problem: The absolute value of $3.4 + 7.8$

$$|3.4 + 7.8|$$

(11.2)
